

Inspirational Afternoon:

Brain Lecture

Wednesday, June 5th at 1:30

The human brain has the same general structure as the brains of other mammals, but has a more developed cortex than any other.

The human brain is almost twice as large as the brain of the bottlenose dolphin, and three times as large as the brain of a chimpanzee. The average human brain has shown to have about 86 billion neurons and 125 trillion synapses in the cerebral cortex alone. We understand less than 20% of brain function.

Join us for this incredible lecture about the human brain!
